This program implements a circular singly linked list to manage a music playlist, with each SongNode<T> storing a song's data and a pointer to the next node, where the last node loops back to the head rather than pointing to nullptr. The four core operations demonstrate the fundamental mechanics of linked list manipulation
You can add music playlist addSong inserts new songs at the end of the list while preserving the circular structure, also you can remove song the playlist traversal, and delete the playlist.
