COURSE CODE/TITLE: CPE 010 DATA STRUCTURE AND ALGORITHM	**SECTION:** CPE21S2
DATE PERFORMED: 07/07/26	**DATE SUBMITTED:** 07/10/26
NAME: Nieles, Cenndy M.	**INSTRUCTOR:** Engr. Jimlord Quejado

ACTIVITY NO. _1.1 Seatwork 1.1 Algorithm, Flowchart, Pseudo Code

1. PROCEDURE OUTPUT

TASK 1

```
Algorithm

1.Start
2.Input the score of quiz 1, quiz 2, quiz 3.
3.Compute the average by adding the three quiz score.
4.Compute the average by dividing the total by 3
5.Display the total score
6.Display the total average score
7.End
```

PSEUDO CODE

START

DECLARE total_score = 0
DECLARE average_score = 0
DECLARE quiz_1, quiz_2, quiz_3

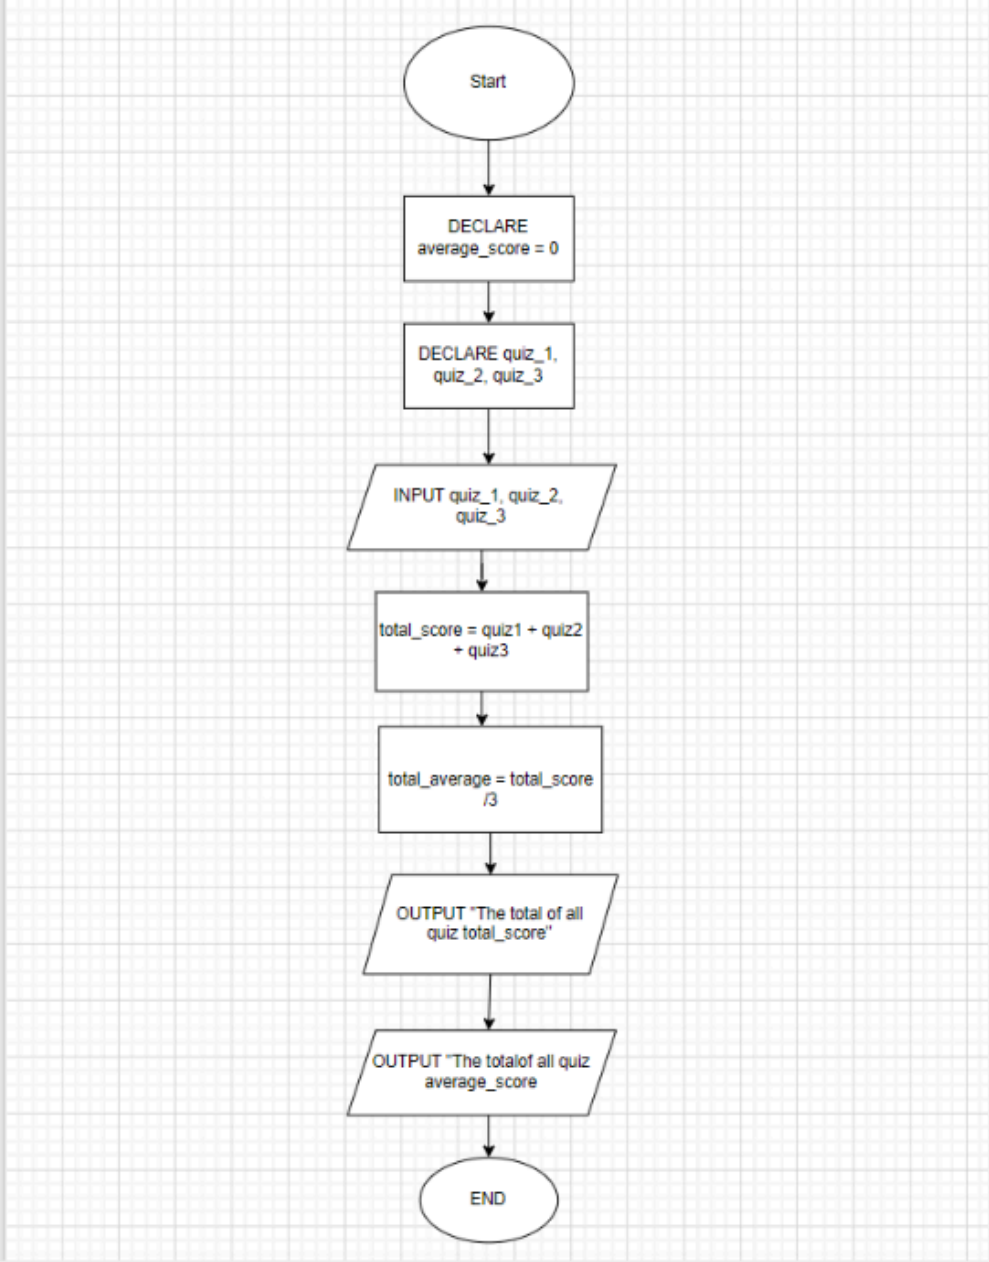

INPUT quiz_1, quiz_2, quiz_3

total_score = quiz_1 + quiz_2 + quiz_3
average_score = total_score /3

OUTPUT The total result of all quiz total_score
OUTPUT The average result of all quiz average_score

END

FLOW CHART

Analysis:

This program first I Declared the important variable to process the program to design to calculate the total and the average of the 3 quizzes score. And the users enter the Quiz 1, Quiz 2, Quiz 3 then add the three scores to get the total and divided it in a total of 3 to get the average. Once the users entered these score, the system adds together to calculate the total combined score.

TASK 2

main2-1 (1).cpp | main.cpp | [*] TASK2.cpp

```cpp
#include<iostream>
using namespace std;

int main() {

int item_1, item_2, item_3;
int total, payment, change;

cout << " Enter price of item_1: ";
cin >> item_1;

cout << "Enter price for item_2: ";
cin >> item_2;

cout << "Enter price for item_3: ";
cin >> item_3;

toal = item1, + item2, + item3;
cout << "Total price of item is : ";
cin >> price;

cout << "Total Price: " << total << endl;

cout << "Enter payment: ";
cin >> payment;

change = payment - total;

 cout << /n----- Transaction-----" << endl;

 cout << "Item 1: " << item1 << endl;
 cout << "Item 2: " << item2 << endl;
 cout << "Item 3: " << item3 << endl;

 cout << "Total price: " << total price << endl;
 cout << " Pyament: " << payment << endl;
 cout << "Change: " << change << endl;

    return 0;

}
```

ALGORITHM

```
1. Start
2. Input Item1, Item2, Item3
3.Compute Total Price
4. Input Payment
5. Compute Change = Cash - Total price
6. Display Total price, Payment, and Change
7.End
```

PSEUDO CODE

START
DECLARE total_price = 0
DECLARE Item_1, Item_2, Item_3

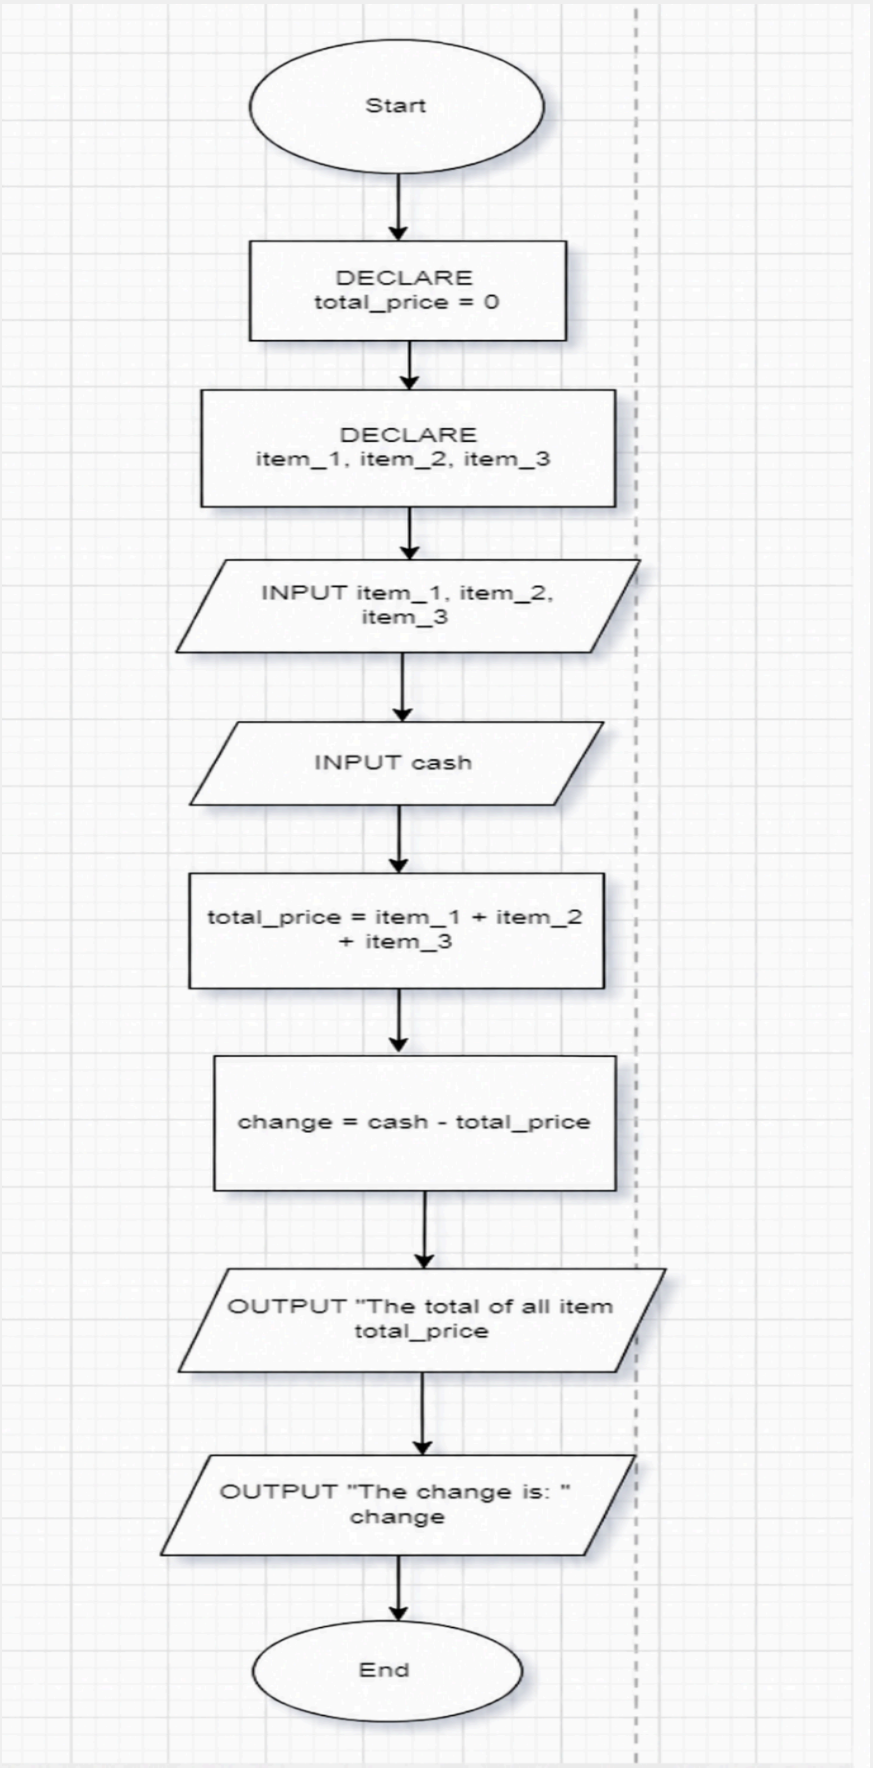

INPUT Item1, Item2, Item3
INPUT cash = total price = item1 + item2 + item3

Change = cash - total price

OUTPUT "The total_ price of all items total_price"
OUTPUT "The change is: " change

END

Start
DECLARE total_price = 0
DECLARE item_1, item_2, item_3
INPUT item_1, item_2, item_3
INPUT cash
total_price = item_1 + item_2 + item_3
change = cash - total_price
OUTPUT "The total of all item total_price
OUTPUT "The change is: " change
End

COMPUTER ENGINEERING

QUEZON CITY

Analysis: For the cashiering program I just followed the steps from task 1 first declaring the important variables : the Price of each item, and the total purchase price, cash rendered by the customer. It tasks users to enter the price of the three items and then calculate their total price. And after displaying the total amount the program asks the payment given by the customer then it will compute the change by subtracting the cash and the total price from the payment and the change it will give back to the customer. FInally the program display the item prices, total price , payment amount, and the change to complete the transaction

What procedures did you performp?

2. ANSWERS TO SUPPLEMENTAL ACTIVITY

Copy and paste the questions from the lab and include your answers after.

3. ARTIFICIAL INTELLIGENCE (AI) USE DISCLOSURE STATEMENT

I hereby declare that artificial intelligence (AI) tools were used, if applicable, in the preparation of this academic work. The following indicates the nature and extent of AI assistance:

Tools Used: ChatGPT and Grammarly , Google

Examples: ChatGPT, Microsoft Copilot, Grammarly, QuillBot, etc.

Purpose of Use: I used those two platforms, the ChatGPT, to explain some scripts that I didn't fully understand and fix some of my errors and to explain the steps where I went wrong and what I did wrong. And the Grammarly to make my sentences words to be correct and the spelling and the google I used to translate from Tagalog to English because some of my sentences are not really perfect when it comes to English.

Examples: grammar correction, idea generation, formatting, summarization, code assistance, explanation of concepts, etc.

Extent of Use:

Explain how AI was used and confirm that it did not replace original thinking, analysis, authorship, or completion of the required work.

By submitting this activity, I affirm that my use of AI complies with T.I.P.'s AI usage policy and does not exceed the permitted limits for similarity, automated content generation, or academic assistance.

I understand that any false, incomplete, or misleading disclosure may be subject to investigation in accordance with due process and may result in sanctions for violation of existing T.I.P. policies.

Lab activities, templates, and related instructional materials shall not be reuploaded, reproduced, distributed, or shared with external organizations or third parties without the prior express written permission of the Technological Institute of the Philippines.
